

Bluetooth® hands-free system

Take the conversation with you

How it works

The Toyota Bluetooth hands-free system is simplicity itself

Answer button

Press to answer incoming calls, redial last number, answer call waiting, place calls on hold and switch between hands-free and privacy mode.

Blue indicator LED

Blue LED light provides a visual cue of the car kit's status.

Backlighting

All buttons are backlit for easy viewing in dark conditions.

Volume buttons

Allows you to increase and decrease volume levels.

End button

Press to end the call, cancel voice-recognition mode, reject an incoming call and terminate the Bluetooth wireless technology connection.

Talk button

Press to place calls using voice controls, get system help and to pair and manage up to four mobile phones with Bluetooth wireless technology.

Backlit keypad can be mounted in a range of positions close to dashboard as shown in:

1. Land Cruiser
2. Aygo
3. Corolla

Speak freely

Communication on the go is easier than ever with the Toyota Bluetooth hands-free system. Designed to meet Toyota's high standards and complement your driving experience, it allows you to enjoy hassle-free, safe communication in your car using a compatible mobile phone with Bluetooth wireless technology. It's quick and easy to install, so everyone can enjoy the benefits of this technological innovation.

Speak clearly

Excellent sound quality and genuine Toyota reliability are at the heart of the Toyota Bluetooth hands-free system. Connected to your car's audio system, you can be sure of clear conversation with features such as noise reduction, high sound output and a directional microphone for maximum pick-up. Speaker-independent voice recognition ensures

that the system can recognise any user's commands without first having to be 'trained' to understand their voice – a great benefit if you share the system with others.

Easy to use too, its stylish, backlit keypad is mounted within close reach on your dashboard, while the voice-activated menu allows you to keep your hands where they belong – on the steering wheel. And using Bluetooth wireless technology, the fully-integrated system transfers conversation from your phone seamlessly, enabling you to continue talking as you enter the car without interruption.

Multiple language

The system understands languages including English, French, Spanish, Italian, Dutch and German.

System main features

The system is designed to give you ultimate flexibility:

- Operate phone using voice commands (speaker independent)
- Seamless connectivity
- Connected to car audio
- Dial up to 20 contacts by name
- Make calls using voice tags (if available on your phone)
- Dial by number
- Toggle between multi-party calls
- Mute and un-mute calls
- Automatically muted radio during calls
- Transfer hands-free calls to your phone and back
- Optimum integration in vehicle

Multiple users

Up to 4 different mobile phones enabled with Bluetooth wireless technology can be paired with the system – one can be connected at a time – so family, friends or work colleagues can all share its benefits.
